This is a fairly common problem with 12V inverters. A normal house plug provides 15A to 20A at 120V. That's 1800W-2400W. Every Amp you draw at 120V is 10 Amps at 12V. People go wanting an outlet or two, to run a fairly low-power 120 V appliance, but it turns out that it requires hooking up some major wires directly to the 12V battery.
