That is good enough. I will attach a picture of the 24v charge controller box I am looking to buy. The pump I am looking at is 24v 330w DC. From my understanding, the startup of the pump needs more than the 330w and solar panels don't put out the maximum rating except under ideal conditions. So I was thinking about getting a 500w panel.

How many solar panels does it take to run a water pump? It takes at least one solar panel to run a water pump. This is because solar panels only produce direct current (DC) energy instead of alternating current (AC). Since it does not create AC, you would need an inverter to convert DC into AC, which household appliances use for consumption.
