Note, when you connect your panels in series, you need to make sure the voltage output is not more than your controller can handle. With respect to my 2424lv controller/inverter, it can handle up to 80-volts. My panel's OVC is 39-volts which is not what they put out under load. So 2 panels in series keep me within my controller solar voltage limit.

The mono 200w Black Frame solar module v2 from Offgridtec (mpn 018400) features 11-busbar technology and works with monocrystalline solar cells with a high efficiency of 22.3%. Thanks to its 30v operating voltage, it is ideal for a wide range of applications. This configuration ensures high performance and reduced yield losses due to voltage drops.

Currently Trina Solar"s most popular panel. Versatile and adaptable, with power output ranging from 225 to 245Wp, the TSM-PA05 is perfect for large scale installations, particularly ground-mounted and commercial rooftop systems.

Re: Converting a 24 V photovoltaic panel output to 12 V One thing to think about is the physical size and weight of the solar panels for your application. 135 watt panels are probably easier to handle/store. 175 watt panels are probably as large as a single person would want to handle. The 225 watt and larger panels might need 2 people to move and setup to limit the ...
