Buck DC-DC converter - named because it "bucks" against the input voltage, this device produces an output that is less than its input. Boost DC-DC converter - does the opposite to the Buck and steps up the voltage output. Cuk - This type of converter is similar to buck-boost converters. The biggest difference is really the name.

The power inverter can convert 24V DC to 110V/120V or 220V/230V AC. Equipped with a USB port, the 24V inverter can be used for multi-purpose charging. 24V inverter has multiple safety protection, durable housing, and compact size. Affordable power inverter price, and the shell material is sturdy and the sockets are available in various forms.

For example if we want a 220W output at 220V then we need 1A at the output. Then at the input we must have at least 18.3V at 12V because: $12V \times 18.3 = 220v \times 1$. So you have to wind the step up transformer 12v to 220v ...
