

Apm150 uninterruptible power supply

What is an APC uninterruptible power supply?

An APC uninterruptible power supply (APC UPS) is a backup power source used during power failures. It provides power to computers, peripherals, networks, servers, and data centers, allowing you to shut down the equipment properly before any damage can occur.

What are the operating modes of ups?

The UPS shall be designed to operate as an on-line, double-conversion, reverse-transfer system with the following operating modes:

- Normal- The critical AC load is continuously supplied by the UPS inverter. The rectifier/c

How efficient is the ups?

The UPS operates with high efficiency - up to 94%at loads of 50-100%. Receive updates on the most important topics in the industry,with latest discussions and expert insights on AI,liquid cooling,and high performance computing in the data center.
