In total, 26 PV greenhouse applications are listed. Table 1 shows that these PV greenhouses were developed recently: all the greenhouses were less than 10 years old, and 90% of them were constructed after 2016. The design of the greenhouse structure in these PV studies was varied; namely, gable, Venlo, pitched, Quonset, flat arch, and tunnel.

Now, Kingpeng Corporation has developed several solutions for greenhouses to use photovoltaic technology: Adjust roof structure of greenhouse, especially the lighting angle of photovoltaic panels; According to the characteristics of solar radiation in different regions, give a reasonable arrangement of photovoltaic panels and glass;

to make the PV system. But as this graphic shows, the investment is small. Assuming 30-year system life, PV systems will provide a net gain of 26 to 29 years of pollution-free and greenhouse-gas-free electrical generation. Figure 1.
