

Building an outdoor power supply

Why should you buy a power supply?

Whether you want to live off the grid or are going through power outages, it can power heavy-load appliances such as dryers, water pumps, AC, etc. It has a compact, quiet design and is equipped with wheels and a pull handle.

How do I supply a new garage?

The conventional method for a new supply to a garage would be to utilise an existing spare way in the consumer unit. A typical garage would generally require a maximum supply of 20 A while making allowance for diversity (Regulation 311.1).

Can a garage supply a socket-outlet?

Furthermore, the circuit supplying socket-outlets in the garage will require additional means of protection from an RCD having the characteristics complying with Regulation 415.1.1 (that is $I_n \leq 30\text{mA}$). The conventional method for a new supply to a garage would be to utilise an existing spare way in the consumer unit.

A typical storage building is built either from an aluminum kit or constructed from lumber, just like a house. A common storage building will provide about a hundred square feet of space that will keep the contents dry. However, most do not have a power source for lights, heat, tools, or security.

Power supply specs should include a safe operating temperature range. It is best to operate within this and make sure not to stick your power supply somewhere where heat can build up and go above this maximum operating temperature. It is generally a bad idea to stick a power supply in a tiny enclosure with no ventilation system.

If the outbuilding isn't more than 50 ft. from the house and has a few lights and outlets, it usually can be supplied by a 120v, 20-amp circuit and 12/2 w/grd UF cable. But check with local building authorities before you start. Get the necessary permit, ...
