

EK outdoor power supply output 9w

How do I add an ek-ab1-tp power supply to an ETS project?

The application software APEKAB1TP##.knxprod(##= version) is available in order to add an EK-AB1-TP power supply to an ETS project. For the commissioning of the device turn on the mains power supply 230 Vac to which the device is connected. The green LED marked "ON" indicates the device operating. The device has a reset pushbutton.

Where should a power supply be installed?

In this case a power supply has to be installed near the group of devices. Between two power supplies installed on the same bus line a minimum distance of 200 m is required, measured along the line. The device has degree of protection IP20, and is therefore suitable for use in dry interior rooms.

Can I use other power supplies to supply the KNX bus lines?

In order to supply the KNX bus lines use only KNX bus power supplies (e.g. ekinex EK-AB1-TP or EK-AG1-TP). The use of other power supplies can compromise the communication and damage the devices connected to the bus. ! Warning! The electrical connection of the device can be carried out only by qualified personnel.
