Are liquid cooled battery energy storage systems better than air cooled?

Liquid-cooled battery energy storage systems provide better protection against thermal runaway than air-cooled systems. "If you have a thermal runaway of a cell, you've got this massive heat sink for the energy to be sucked away into. The liquid is an extra layer of protection," Bradshaw says.

What is the difference between air cooled and liquid cooled energy storage?

The implications of technology choice are particularly stark when comparing traditional air-cooled energy storage systems and liquid-cooled alternatives, such as the PowerTitan series of products made by Sungrow Power Supply Company. Among the most immediately obvious differences between the two storage technologies is container size.

The reduced size of the liquid-cooled storage container has many beneficial ripple effects. For example, reduced size translates into easier, more efficient, and lower-cost installations. "You can deliver your battery unit fully populated on a big truck. That means you don't have to load the battery modules on-site," Bradshaw says.

Why is liquid cooling better than air?

Liquid-cooling is also much easier to control than air, which requires a balancing act that is complex to get just right. The advantages of liquid cooling ultimately result in 40 percent less power consumption and a 10 percent longer battery service life. The reduced size of the liquid-cooled storage container has many beneficial ripple effects.

Are solar-plus-storage projects eligible for the ITC?
