

What is a smart-in inverter?

SMART-IN: 12v 220v pure wave and modified wave inverter(or 24v 220V for some models) that stands out for its construction quality and design. Designed to provide high performance,maximum safety,reliability and above all quiet operation,which is important for those installing the inverter inside the cabin.

What is smart-in pure with IVT function?

SMART-IN PURE with IVT function is a range of inverters with an integrated priority system(Priority Switch type). This special IVT function, using the two 230V input and output sockets, allows management of the voltage coming from the inverter connected to the battery and from the external grid.

What is the IVT function?

The IVT function is a priority systemthat allows the inverter to automatically power itself from the 230V mains, when available, and switch back to battery power when needed.

Can Smart-in be used as an Inverter air conditioner?

SMART-IN can be used as an inverter air conditioner, inverter air conditioner, and especially in the pure wave version to power all the finest electronics, such as televisions, PCs, and all professional and healthcare equipment.

What is the difference between a standard and IVT power supply?

Standard versions have one or two output sockets, while models with IVT (integrated priority function) have one output socket and a fuse-protected Input (IEC) socket where the external power supply will be connected. Integrated mounting brackets allow safe installation in any position.

Which inverter has the lowest self-consumption?

SMART-IN inverters can claim some of the lowest self-consumption on the market. Very often an inverter remains in stand-by mode, thus continuing to consume current, so having a low self-consumption allows you to conserve energy.

SMART- IN PURE with IVT function is a range of PURE SINE WAVE inverters with an integrated priority system (Priority Switch type). This special IVT function, via the two 230V input and output sockets, allows the management of the ...

With their precise construction IVT"s Digital Sine Wave Inverters fully meet these expectations. True sine wave output voltage: All IVT inverters of the DSW series convert a battery voltage of 12 V respectively 24 V into a true sine wave alternating voltage of 230 V/50 Hz at the output. Thus, even sensitive electrical consumers such as notebooks.

The robust SW-600 sine wave inverter reliably and precisely converts an input voltage of 24 V DC into a real sine wave AC voltage of 230 V/50 Hz. Independent of the mains grid, even highly sensitive consumers as well as consumers with increased starting current can be operated stably and absolutely trouble-free.

The robust SW-150 sine wave inverter reliably and precisely converts an input voltage of 12 V DC into a real sine wave AC voltage of 230 V/50 Hz. Independent of the public power grid, even highly sensitive consumers as well as consumers with increased starting current can be operated stably and absolutely trouble-free.
