What is a lithium ion battery?

In the ever-evolving world of energy storage, lithium-ion batteries have become the cornerstone of innovation. Among various "lithium-ion types," the LiFePO₄ (Lithium Iron Phosphate) variant stands out for its safety, efficiency, and longevity.

What are the different types of lithium ion batteries?

Lithium-ion batteries come in different types, each with unique features: Lithium Iron Phosphate (LFP): Known for being safer and having a longer lifespan, but slightly lower energy density. Lithium Nickel Manganese Cobalt Oxide (NMC): Offers higher energy density and better efficiency, but is generally more expensive.

How do lithium batteries store energy?

Lithium batteries rely on lithium ions to store energy by creating an electrical potential difference between the negative and positive poles of the battery. An insulating layer called a "separator" divides the two sides of the battery and blocks the electrons while still allowing the lithium ions to pass through.

Do all batteries use lithium?
