Dedicated circuits are designed to protect your major appliances from electrical damage, and they also function to prevent overload-related fires and electrocution. Operating major appliances on non-dedicated circuits can be extremely risky as these devices can draw more current than a non-dedicated circuit can handle.

High power electrical appliances (such as cookers, showers etc.) should not be connected to a ring main even if they use less current than the 30 amp rating of the ring circuit. Connection of such appliances will reduce the number of other appliances that can be use simultaneously and will lead to nuisance trips at the consumer unit.
