Avoided emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels.

MARK THOMAS: The National Energy Strategy is a government initiative that is being developed with shortand long-term approaches to the kingdom's power supply. One of the primary goals is to diversify the energy supply, since Bahrain is dependent on domestic natural gas. As natural resources are finite, it is important to find replacements.
