In the review [14], the focus is put on the intermittence issue of roof-top PV power plants and the use of energy storage systems for avoiding reverse power flows. In [21], a study of a hybrid PV storage power plant for power dispatching is performed. Particularly, the objective is to reduce the power unbalances between the PV power scheduled ...

Due to the inherent instability in the output of photovoltaic arrays, the grid has selective access to small-scale distributed photovoltaic power stations (Saad et al., 2018; Yee and Sirisamphanwong, 2016). Based on this limitation, an off-grid photovoltaic power generation energy storage refrigerator system was designed and implemented.

Thirdly, energy storage can bring more revenue for PV power plants, but the capacity of energy storage is limited, so it can't be used as the main consumption path for PV power generation. The more photovoltaic power generation used for energy storage, the greater the total profit of the power station.
