

## Portable UPS power supply in Antwerp Belgium

A UPS system differs from other standby power systems by using energy stored in batteries or supercapacitors to maintain power to the electrical load during mains supply disruptions. The battery runtime of most UPS systems is relatively short, often just a few minutes.

This powerful, pure sinewave UPS system delivers cleaner, more stable power for protecting high-end electronics. It combines 10 power outlets with surge protection (six with battery backup) and 900 watts of power to keep power-hungry devices like desktop PCs and monitors running for quite some time.

UPS operates in more than 220 countries and territories worldwide, with a fleet of over 125,000 vehicles and 500 aircraft, and employs approximately 540,000 people. The company's mission is to be the world's most admired, global logistics company, by delivering outstanding quality, innovation, and value to their customers.
