What is pure sine wave inverter?

Pure sine wave inverter is a type of high-frequency inverter which is the most advanced and efficient type of inverter. They produce a smooth sinusoidal waveform that is nearly identical to the current supplied by the grid. This type of inverter is therefore ideal for sensitive electronic equipment that requires a stable power supply.

What does an inverter do?

In short, an inverter converts electricity from direct current (DC) to alternating current (AC). This switch is critical for powering many AC appliances and devices. Besides changing current, inverters also regulate energy flow. They must match devices' energy demands, focusing on watt-hour calculations and amps.
