How many solar inverters can be connected in parallel?

In single-phase operation, up to six solar inverters can be connected in parallel. This parallel connection enables the inverters to work together and support a maximum output power of 24 KW/30 KVA. In three-phase operation, a maximum of four inverters can support one phase.

How to parallel a single phase system?

If you paralleling the system as single phase system, the most important thing is to make sure the L & N lines of each unit (AC port And EPS port) are correctly connected, please check with multi-meter to make sure L cable of each unit is connected. Do not connect one inverter's L cable to another inverter's N cable.
