A sophisticated UPS power supply may offer AVR, or automatic voltage regulation. This feature stabilizes incoming AC power so that it is always delivered at 120 volts, without requiring the backup battery to come online. This is useful for preventing a UPS from repeatedly switching between AC and battery power during frequent brownouts.

Include all of the devices the UPS will need to support. If a piece of equipment has a redundant power supply, only count the wattage of ONE power supply. If you are unsure how many watts your equipment requires, consult ...

As a global leader in the design and manufacture of power electronics for in excess of 30-years, we have seen a significant increase in the enquiries for Uninterruptible Power Supplies (UPS) to provide a secondary supply for emergency evacuation and firefighting lifts.. The driver for these enquiries is typically as a result of the change in UK legislation, particularly the ...
