

What is an uninterruptable power supply (UPS)?

What is a UPS? An uninterruptable power supply (UPS) is a type of backup batterythat will continue to provide electrical power to the electronics that you have plugged into it even if electricity from your home outlets cuts out. Unlike a backup generator, it does not need to power up in order to start generating power.

What is the best ups?

Read More » Our pick for the best UPS overall goes to the APC BR1500G Backup Battery. At 1500VA/865W, it can power most devices, including computers, external hard drives, and wireless routers, from a few minutes to several hours, depending on the total connected load.

Should I buy a ups for my home?

You may find that you're plugging in a lot more power-hungry devices into your home power supply, and this could lead to power cuts or power surges. Your home likely won't have the power backup solutions that your office does, so buying a UPS for your home could be a very wise investment.

Do smart devices need an uninterruptible power supply (UPS)?

Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day. However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in.

Which ups should I buy?

For larger setups that need extended runtime, the APC BR1500MS2 is the ideal pick. This UPS offers the highest peak power output and the most robust backup duration among our recommendations, making it perfect for high-performance PCs, networking equipment, and other critical devices.

Why should you buy the best ups?

That's where the best UPS come in, as if there's a power cut, they will seamlessly switch to battery power, and your devices will remain on and running until the main power is restored, or you can safely shut down the device. These days many of us are working from home, so buying the best UPS your budget can stretch to is even more important.
